Subject: Objection to Development Proposal DA2023/0130 - Demolition of Existing Buildings and Construction and Operation of an Organic Waste Transfer Station

To whom it may concern,

It is a bad idea to build a waste transfer station in Lidcombe especially in this high density area.

Concerning the environment for residents in Cumberland area, having bad odor and air pollution around the residential and school areas will be unbearable. Not to mention risk of having higher infections disease can be speared by large amount of flies and cockroaches. Auburn hospital is already under the pressure of medical resources for our local residents lately during the pandemic.

In addition, having rubbish trucks around Church st can escalate the risks of road safety for the school zones and causing the burden for residents raising council fees to fix the damage roads.

The value of property and land in Lidcombe will be reduced if the waste station being built. At the moment, Lidcombe is such a beautiful suburb for local residents and for residents in Rookwood.

In conclusion I strongly against the waste transfer station to be built in Lidcombe.
