Dear Cumberland council

I would like to object to the idea of turning Our home suburb into a garbage center, as it is illogical, wasteful, disrespectful and unmindful. Even as society evolves, humans can make irreversible mistakes. This is proven by the idea of turning someone's living environment into a dumpster used for waste that will bother many residents in a very big residential area.

As well as wasting hundreds upon thousands of dollars on movement material, Lidcombe and many other suburbs close to Libcombe are a collection of residential areas which have thousands of people. Placing a garbage station in Lidcombe will not only cause all the people in Lidcombe to move, but it will also inflict damage on other places around Lidcombe like Newington, Stratfield, Auburn and many more. The Location of 109A church street is also inappropriate as the garbage station will steal the glances of oncoming passengers on trains, making this place unlivable to the eyes of strangers. The smell alone will drive away permanent residents and inflict serious damages on the climate. To top off the idea of Turning Lidcombe into a Trash site, it will set off a chain reaction as it will influence more trash sites. As future chains continue, Lidcombe will have to demolish more buildings and houses costing from an average of \$600,000 to \$2,500,000 and there is an average of about 200 to 500 houses in each suburb, and there are a lot of suburbs around that will notice and move. After about possible billions of dollars wasted on turning a perfectly normal suburb into a houseless field of trash. This will result in giving Lidcombe a bad name and omen.

Drivers will have a harder time as the smell affects the fuel life and speed of a car as it absorbs air to keep fuel and speed a little more efficient than it's already supposed to be. As trash gives continuous negative effects, this will affect lots of other things like company production quality and speed, health and economical factors such as plant life and environment. Plant life is more useful than you might think. It provides us with food and oxygen and we're killing it with the pollution from the Garbage station close to it. This will also impact stationary around Lidcombe like the Auburn Hospital and

Strathfield private hospital. These two have one of the most technologically advanced medical gear in Australia, and if there is a trash center near it, The trash will impact the hospital patients as it can further worsen any diseases the patients carry or it can weaken the patient entirely. The elderly as they have fragile immune systems live in nursing homes near that location, Like the nursing home on 23 Mary street Lidcombe. People like them will have to move immediately as they have less fragile systems as I have already clearly stated.

As a result of the placement, Many cars use Church street to cross to many alternating paths such as the A3 highway and the intersection to Auburn, Chillora and Chester Hill. There will be a big impact on those roads, creating a traffic chain everywhere. It is estimated that traffic after the traffic chain will be about 17% slower than usual rates, and the traffic will make the cars consume more fuel as it takes more power to stop and wait then it is to go at a constant speed, therefore wasting more fuel and causing mass environmental demolition.

Overall, I would like to Object to the idea of the placement of the new Garbage station because of the environmental, communicable and economic factors, and I Hope you have taken this email to consideration.

Yours Sincerely,
