

Subject: Objection to Development Proposal DA2023/0130 – Demolition of Existing Buildings and Construction and Operation of an Organic Waste Transfer Station

Dear Cumberland Councillors:

Hope my email finds you well. I am writing this email to express my strong objection to the development proposal outlined in DA2023/0130, regarding the demolition of existing buildings and construction and operation of an organic waste transfer station in Lidcombe.

As a local resident and advocate of environment protection, my concern is the proposed project will have an adverse impact on the well-being of our community, our residents and the overall ecological balance. My most concerns about are recommendation is potential impact on traffic congestion in our community. The current traffic situation is busy enough as you know. The proposed organic waste transfer station will further increase the existing congestion in churches, railways and Arthur Street, particularly on A3 motorway. The congestion will increase the longer queue, slower travel time and potential car accidents.

My other concern is healthy issues. The proposed organic transfer station will increase health issues due to the air pollution, noise and bad smell especially in the hot weather. I believe people in this community don't want this happen in the future.

In view of the concerns raised above, I request the Cumberland council to reevaluate the approval of the development proposal DA2023/0130. Health and well-being are our priority for our communities. The proposed organic waste transfer station must thoroughly consider and mitigate the potential adverse effects on traffic flow and traffic congestion to ensure the well-being and safety of the community.

I am strongly believing the Cumberland council will carefully consider these objections and take the necessary steps to address the questions raised by concerned residents like me. Thank you for your attention to this matter. I look forward to a prompt response regarding this matter.
